

CLAIM AMENDMENTS

Please amend the claims as follows:

1. (currently amended): A clear aqueous microemulsion of a complex consisting essentially of
 - (a) a lipase associated complexed with a least one C₁₆-C₂₀ monounsaturated fatty acid or an ester thereof; *interchangeable as admitted by applicant - see pg. 4 of this paper.*
 - (b) an anionic surfactant blend;
 - (c) a microemulsion surfactant blend; and
 - (d) optionally, ethoxylated linear alcohols of C₈-C₁₂, which microemulsion has a turbidity less than 3 NTU. *nothing in claim to dictate that "Clear aqueous" after "Complex" is "essentially" of "*
2. (currently amended): The microemulsion of claim 1 wherein in said complex of claim 1 wherein
said ester is a monoglyceride, a triglyceride or a diglyceride. *electal.*
3. (currently amended): The microemulsion of claim 1 wherein in said complex of claim 1 wherein the monounsaturated C₁₆-C₂₀ fatty acid is an oleic acid. *electal.*
4. (currently amended): The microemulsion of claim 1 wherein in said complex of claim 1 wherein said fatty acid or ester is derived from a vegetable oil.
5. (currently amended): The microemulsion of claim 1 wherein in said complex of claim 1 wherein said lipase is a fungal lipase.
6. (currently amended): The microemulsion complex of claim 4 wherein the fungal lipase is derived from a *Laetiporus*, *Ganoderma*, *Mucor*, *Rhizopus*, *Penicillium*, *Candida* or *Aspergillus*. *electal*
7. (currently amended): The microemulsion complex of claim 6 wherein said fungal lipase is derived from *Laetiporus*.
8. (currently amended): The microemulsion of claim 1 wherein in said complex of claim 1 wherein said lipase is derived from a bacterium.

9. (currently amended): The microemulsion complex of claim 7 wherein the lipase is derived from *Pseudomonas, Rhizobium or Chromobacterium.*

10. (currently amended): The microemulsion of claim 1 wherein in said complex of claim 1 wherein said lipase is provided in purified form.

11. (currently amended): The microemulsion complex of claim 5 wherein the lipase is provided as a fungus culture filtrate.

12. (original): The microemulsion of claim 1 wherein in said complex of claim 1 wherein at least one surfactant comprises polyalkoxy chains.

13. (currently amended): The microemulsion complex of claim 12 wherein said polyalkoxy chains are polyethoxy chains. *Tornado?*

14. (canceled)

15. (currently amended): The microemulsion complex of claim 14 1 which wherein said emulsion has a turbidity less than 1 NTU.

16. (currently amended): The microemulsion of claim 1 wherein in said complex of claim 1 wherein the ratio of component (a) to surfactant is about 1:6.5-1:8.5.

17. (currently amended): The microemulsion complex of claim 16 wherein the ratio of component (a) to surfactant is 1:7.75.

18-48 (canceled)

49. (currently amended): The microemulsion composition of claim 1 wherein in said complex the polyalkoxylated linear alcohol has an alkoxylene:alcohol ratio of 8:1 to 2:1.

50. (currently amended): The microemulsion composition of claim 49 wherein said ratio is 2.5:1.

51-65 (canceled)
